Im a self taught web developer. I have been building websites and numerous side projects over the last 3 years, learning by doing, hacking things out and always trying new things.

Working with clients has resulted as a tremendous personal grow, not just for monetary reasons, I have been “forced” to wear several hats, like information architect, story developer, designer, web developer, vps magician and a few more.

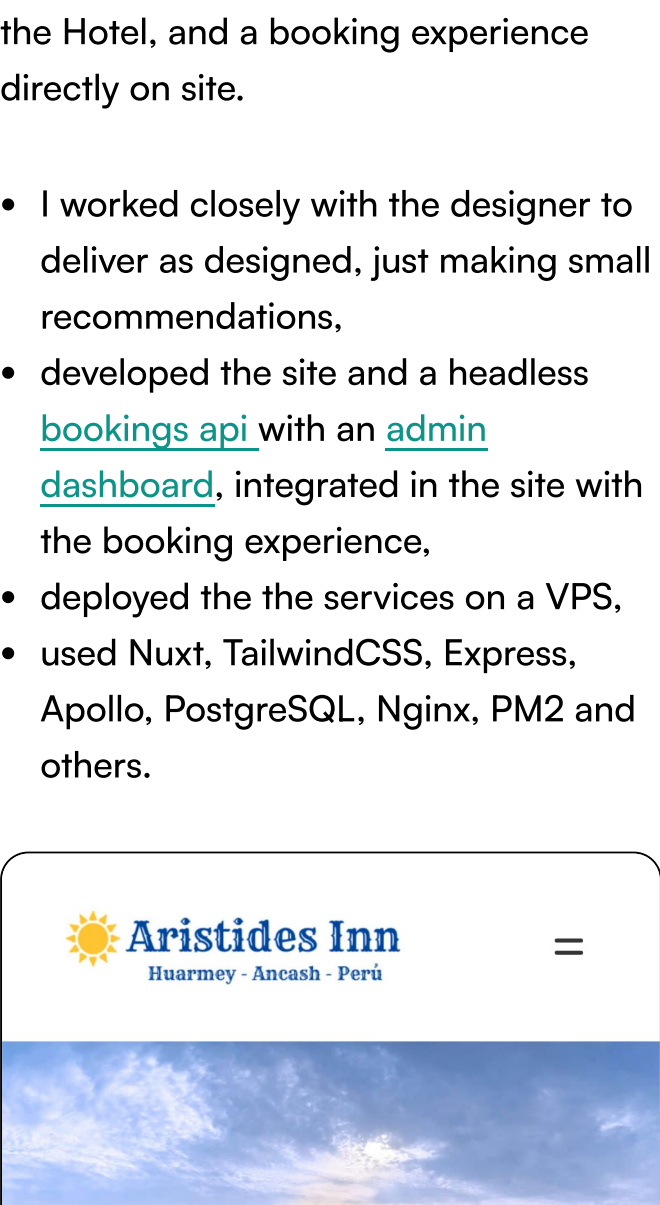

Most of my experience has been working with Vue.js, specifically doing Nuxt.js sites, paired with several modules to cover different use cases like internationalization and others. Although I have done several REST services, even a headless TinyBookings API, powered by GraphQL & PostgreSQL, with a Nuxt Dashboard.

The following are some of the best projects I have crafted.

aa-meals.com

AA Meals is a healthy food delivery service based on Miami, they needed a site for the brand, to showcase their service and get new costumers, and allow them sign up for the service.

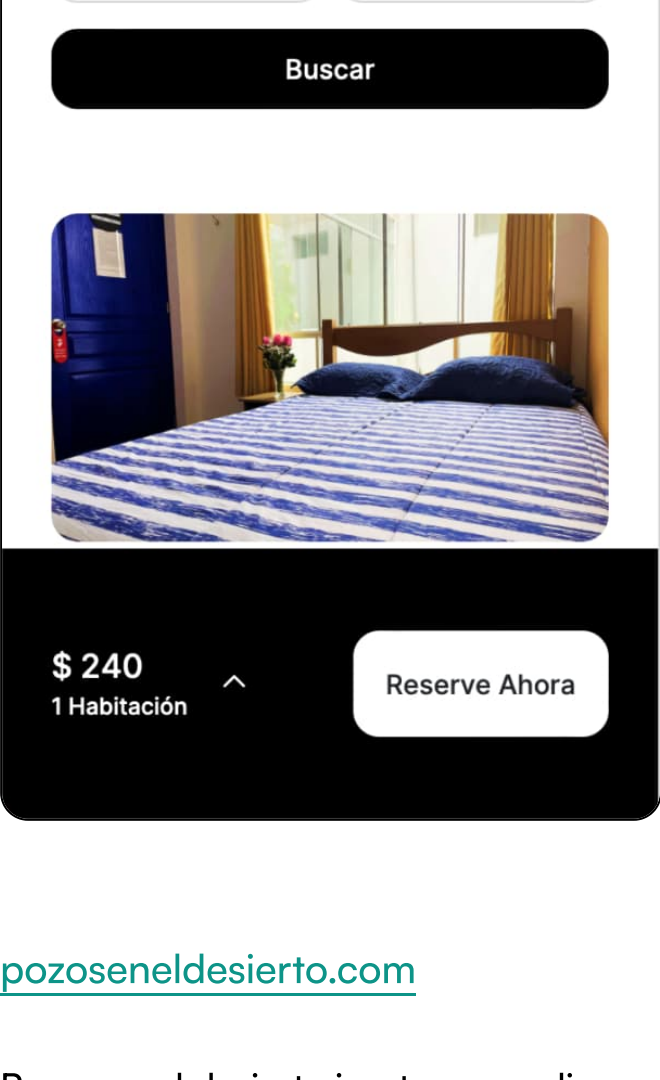

- I help them to develop their story,
- designed the logo and the site,
- crated the web, and a REST service that handle the SignUps,
- deployed the web and the service on a VPS with automated certs rotation,
- used Figma, Nuxt, TailwindCSS, Express, Nginx, PM2 and others.

aristides-inn.com

Aristides Inn is a Hotel located in Harmuey, Peru. They needed a site for the Hotel, and a booking experience directly on site.

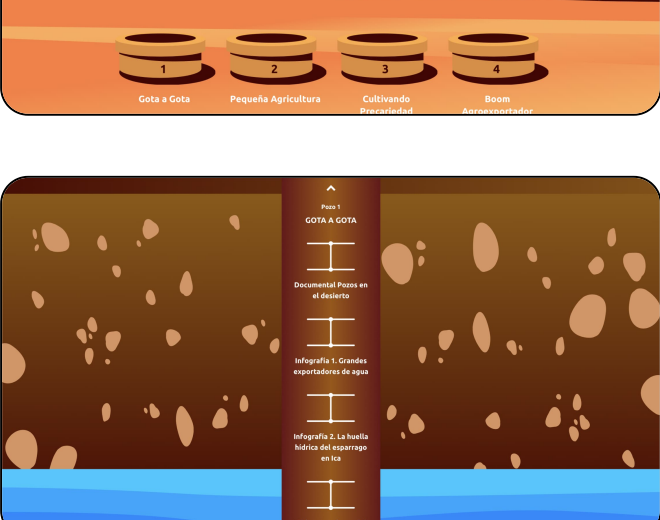

- I worked closely with the designer to deliver as designed, just making small recommendations,
- developed the site and a headless [bookings api](#) with an [admin dashboard](#), integrated in the site with the booking experience,
- deployed the the services on a VPS,
- used Nuxt, TailwindCSS, Express, Apollo, PostgreSQL, Nginx, PM2 and others.

pozoseneldesierto.com

Pozos en el desierto is a trans-media piece elaborated for a Peruvian Film Studio called Hiperactiva Comunicaciones. The website compose a myriad of stories, wish the visitor can choose how and in what order to consume, the stories unfold a big social and environmental problem of the region, and it win some prices in several events.

- I worked closely with the Designer and the Editors to delivered as designed and Approved,
- help with the concept and design of some interactive widgets,
- developed the site, using heavily the latest Vue composition patterns to make a more approachable codebase with so much nested and complex interactive pieces,
- in addition to the main site i deployed a self-hosted NextCloud instance to make easy media collaboration with editors, and a Plausible Analytics,
- deployed the web and the other services on a VPS with automated certs rotation,
- used, Nuxt, TailwindCSS, NextCloud, Plausible Analytics, Nginx and others.

Thanks for reading, tenga buen día.
